

Service Description Bulletin

Precious Metals Refining

*Metech International - an ISO 9001:2000, ISO 14001:2004
and IAER (International Association of Electronics Recyclers) Certified Electronics Recycler®*

Precious Metals Services

Metech International offers precious metals recovery services to a wide range of industries.

The Metech-pioneered shred and sample method of processing, according to industry consultants, is more reliable than other processing schemes.

A reliable sample, combined with an accurate assay from our world-class Analytical Laboratory, delivers a better return to our client companies.

Metech's exclusive ERP software system was custom-built for our business and offers "real time" data tracking of your material... by the ounce.

Our accountability doesn't start in the plant - it starts with our quotes.

Our terms are direct, easy to understand and list all processing fees, line by line.

It's all part of our commitment to the protocol we call Accountable Resource Management® - ARM®.

By using Metech, you avoid the risks of material mixing, improper or lack of tracking, and less than accurate returns. The result is a positive impact to your "bottom line".

Metech - the only choice for precious metals recovery.

Industries we serve:

- Telecommunication
- Automotive
- Financial
- Commercial
- Institutional
- Medical
- Precious metal
- Computer
- Electronics manufacturers
- Consumer
