Solutions Processing

Metech International - an ISO 9001:2000, ISO 14001
and IAER (International Association of Electronics Recyclers) Certified Company

Precious Metal Solutions

Metech International's Gilroy, California facility recovers precious metals from a wide range of solutions.

Our large reclamation facility is well equipped to process liquids using precipitation, evaporation, electro-winning or any strategic combination of these methods to provide for economical and efficient material recovery.

We have the experience to develop custom treatment methods based on the value of the material and the solution composition.

Our more than 25 years in the precious

metal recovery business has made us an expert in handling nitric acid, iodine, cyanide, solvent (such as acetone or MEK), mixed acid, lean liquor, and many other acidic and alkaline solutions.

With capacity to handle more than 10,000 gallons of material at any given time, we offer quick turn-around.

Our Gilroy facility is a permitted TSDF that can economically handle marginal value hazardous solution - offsetting the cost for environmentally correct disposal.

Metech-Gilroy, your best choice for solution processing

Metech International Advantages:

- No solutions or process liquids are directly discharged to Publicly Owned Treatment Works (POTW)
- Using our in-house laboratory, we can determine solution value to help evaluate processing economics
- Metech "milk runs" are already established in many parts of the country, eliminating "minimum quantity" shipping requirements, guaranteeing proper material handling and economical shipping rates
- Environmentally correct processing through Metech's Accountable Resource Management® (ARM®) protocol
- Metech International is an ISO 9001, ISO 14001 and IAER Certified recycler and asset management company

Industries we serve:

- Telecommunication
- Automotive
- Financial
- Commercial
- Institutional
- Medical
- Precious metal
- Computer
- Electronics manufacturers
- Consumer
